Address: Kaluthara, Sri Lanka

OBJECTIVE

As an enthusiastic 3rd-year undergraduate specializing in Software Development and Quality Assurance, I am eager to apply my technical knowledge and analytical skills in a professional environment. I am dedicated to delivering high-quality software solutions while continuing to develop my expertise in modern technologies like Java, React, and automated testing.

EDUCATION

- **B.Sc. (Hons) in Software Engineering (2024 – Present)**
 - National School of Business Management – Faculty of Computing (NSBM Green University)
- **GCE Advanced Level Examination (2021) – Commerce Stream**
 - Bandaragama National Collage, Bandaragama
 - Accounting, Business Studies, Economics
- **NVQ Level 4 in ICTT – NYSE Panadura (2022)**
- **Level 1 in Spoken English – University of Colombo**

PROJECTS

1. **Ground Booking System**-Developed a web application to streamline sports ground reservations and prevent double-bookings. Implemented real-time slot availability checks and an efficient Admin Dashboard for venue management's Stack: [CSS, React ,Node js] | Database: [MySQL]
2. **Omi Royal Game**-Tech Stack: Flutter, Dart, State Management, Custom Vector Layouts. Core App: Built a high-performance digital simulation of the traditional card game Omi with predictive gameplay algorithms. 60FPS Optimization: Fixed rendering bottlenecks and device overflow crashes by replacing heavy blur filters with high-performance gradients. Rule Engine & AI: Implemented traditional game logic Matrices ('Renou', 'Kapothi') and intelligent bot mechanics tracking trick histories. Dual-Language Support: Architected on-the-fly localization toggling between English and Sinhala with culture-specific score mappings ('Seporu'). Code Quality: Delivered a production-ready codebase keeping a strict 0 Errors & 0 Warnings status across the widget lifecycle
3. **Real-Time High-Concurrency Booking Engine**-Built a full-stack reservation system using React.js, Node.js, Express.js, and MySQL. Prevented overbooking and race conditions under heavy traffic using MySQL FOR UPDATE pessimistic locks. Integrated Socket.io (WebSocket) for microsecond, real-time inventory synchronization across all client sessions. Engineered a Dynamic Pricing Algorithm that auto-scales seat rates by 1.5x once occupancy crosses an 80% threshold. Developed an automated background worker using node-corn to safely release unconfirmed holds after a 10-minute timeout.
4. **Task Flow: Full-Stack Kanban Board & Automated QA Pipeline**-Tech Stack: React.js, Node.js, Express, MySQL, Playwright, Jest, Supersets, REST API Developed a full-stack task manager with a 3-column Kanban board, live clock widgets, dynamic profile editing, and task deletion features. Built

automated backend Integration Tests using Jest & supersets to validate REST API routes and MySQL database mutations. Engineered End-to-End (E2E) UI Tests via Playwright using data-tested selectors, achieving complete user flow execution in under 750 milliseconds. Structured the application with clear backend-frontend separation adhering to enterprise architecture standards.

TECHNICAL SKILLS

- **Languages** – JavaScript, Python, Dart, Java, HTML & CSS
- **Frontend & Web Development** - React, Flutter, CSS
- **Backend & APIs** - Node.js (Express)
- **Databases & Infrastructure** - MySQL,

SOFT SKILLS

- **Leadership & Communication** – Coordinated and led several university project teams of 6 –10 members.
- **Mentoring & Tutoring** – Head Prefect in Gungamuwa.K.V

EXTRA CURRICULAR ACTIVITIES

- **Member** – FOSS Community, NSBM Green University

WORKING EXPIRENC

- I received a six-month training at Peoples Bank under the IT Coordinator

REFERENCE

Mr. A.P.P.S Vas Gunawardana

Deputy Manager,
Peoples Bank Head Office
